mitogen-activated protein kinase 5 (EC 2.7.1..) - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Daccession: 340471
R;Mizoguchi, T.; Hayashida, N.; Yamaguchi-Shinozaki, K.; Kamada, H.; Shinozaki, K.
FBES Lett. 336, 440-444, 193
A;Title: ArMPKs: a gene family of plant MAP kinases in Arabidopsis thaliana.
A;Reference number: 840469; MUID:94109583; PMID:8282107
A;Residues: 1-376 cMIZ>
A;Residues: 1-376 cMIZ>
A;Residues: 1-376 cMIZ>
A;Cossasion: S40471
A;Molecule type: mRNA
A;Residues: 1-376 cMIZ>
A;Cossasion: Superfamily: kinase-related transforming protein; protein kinase homology
C;Genetics:
A;Gene: MPKS
C;Superfamily: kinase-related transforming protein; protein kinase homology
C;Keywords: ATP; phosphotransferase; serine/threonine-specific protein kinase
F;40-238/Domain: protein kinase ATP-binding motif

New isolated nucleic acid molecule encoding a mitogen-activated protein kinase-5 (MAPKS) polypeptide, useful for increasing tolerance to abiotic and biotic stress in plants. Claim 24; SEQ ID NO 2; 36pp; English. The invention relates to a rice mitogen-activated protein kinase 5 (MAPKS) polypeptides and the polymucleotides encoding them. The invention also relates to an antibody that specifically binds to a peptide consisting of a C-terminal portion of a MAPKS polypeptide, a transgenic plant transformed by a polymucleotide encoding a MAPKS orthologue where

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-JUN-1999
  over expression of the MAPKS orthologue in the plant results in increased for lecrance to abiotic stress compared to a wild-type plant and a method for evaluating a plant for tolerance to abiotic stress comprising treating a plant with abiotic stress, isolating a MAPKS protein from the plant, detecting MAPKS activity and evaluating the increase or decrease indicates the plant where the increase in MAPKS activity in the plant where the increase in MAPKS activity indicates the plant are useful for increasing tolerance compositions of the present invention are useful for increasing tolerance to abiotic and blotic stress in plants using MAPKS, where the abiotic stress is decought, temperature or salinity and the biotic stress is from pathogenic bacteria, viruses, nematodes and insects. This sequence represents the rice MAPKSa polypeptide of the invention.

                                                                                  ò
                                                                                                                 ద
                                                                                                                                                                                                                                           ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides Zea mays signal transduction proteins and encoding nucleotide sequences. The nucleic acids are useful for regulating expression of phytohormones, including ethylene, auxins, cytokinins, and gibberellin, to effect developmental changes in plants and provide control of plant response to environmental stresses. They may also be used as probes or amplification primers in the detection, quantitation or isolation of gene transcribts, for detecting mutations in the gene, for monitoring upregulation of expression or changes in enzyme activity in screening assays of compounds, for detection of any number of allelic variants, or for site-directed mutagenesis in enkaryotic cells. They may further be used for recombinant expression of their encoded polypeptides, as immunogens in the preparation or screening of antibodies, and in sense or antisense suppression of genes in a host cell, tissue or plant. The proteins may be used in assays for enzyme agonists or antagonists, as immunoreactive with the proteins. The present sequence represents a signal transduction protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FGLARPSSESDMMTEYVVTRWYRAPELLLMSTDYSAA-DVWSVGCIFMELINRQPLFPGR 239

This sequence contains the T-E-Y sequence, in which the threonine and tyrosine residues are phosphorylated to activate the protein at residues201-203. The MAP kinase and its gene can be used

to regulate the synthesis of jasmone acid and the synthesis of a group o infectious specific proteins. By introducing the MAP kinase gene into a plant, thereby inducing expression of the mRNA for MAP kinase (or its antisense RNA), the synthesis of jasmone acid and a group of infectious specific proteins can be regulated in the plant

The invention provides Zea mays signal transduction proteins and encoding nucleotide sequences. The nucleic acids are useful for requiating connected sequences. The nucleic acids are useful for requiating of phytohormones, including ethylene, auxins, cytokinins, and gibberellin, to effect developmental changes in plants and provide control of plant response to environmental stresses. They may also be control of plant response to environmental stresses. They may also be control of gene transcripts, for detecting mutations in the gene, for solation of gene transcripts, for detecting mutations in the gene, for controling upregulation of expression or changes in enzyme activity in screening assays of compounds, for detection of any number of allelic contributer be used for recombinant expression of their encoded polypeptides, as immunogens in the preparation or screening of antibodies, and in sense contains may be used in assays for enzyme agonists or antagonists, as immunoreactive with the proteins. The present sequence represents a signal transduction contains of the invention contains and antibodies specifically immunoreactive contains of the invention contains and antibodies as a signal transduction contains and antibodies and antibod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       212

activated by an agent that induces a disease defence response in plants depway of a signal transduction pathway that is at least partially dependent on salicylic acid. Host plant cells transformed with a vector containing a recombinant DNA molecule encoding the salicylic acid induced MAP kinase is used to produce the protein recombinantly. The products can be used to produce plants with increased disease resistance. The products may also be used as a research tool to identify other proteins involved in the hypersensitive response and systemic acquired response in plants
                                                                                                                                                                                                                                                                             180

The invention provides Zea mays signal transduction proteins and encoding nucleotide sequences. The mucleic acids are useful for regulating expression of phytohormones, including ethylene, auxins, cytokinins, and cibberellin, to effect developmental changes in plants and provide control of plant response to environmental stresses. They may also be control of plant response to environmental stresses. They may also be control of plant response to environmental stresses. They may also be control of gene transcripts, for detecting mutations in the gene, for monitoring upregulation of expression or changes in enzyme activity in strength or for site-directed mutagenesis in enzyme activity in variants, or for site-directed mutagenesis in enkaryotic cells. They may further be used for recombinant expression of their encoded polypeptides, as immunogens in the preparation or screening of antibodies, and in sense or antisense suppression of genes in a host cell, tissue or plant. The proteins may be used in assays for enzyme agonists or antagonists, as immunogens or antisense to obtain antibodies specifically immunoreactive with the proteins. The present sequence represents a signal transduction protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          122

The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the polymucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, initrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one struction of content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      172 ANCDLKICDFGLARPSSESDMMTEYVVTRWYRAPELLLNSTDY-SAADVWSVGCIFMELI 230

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                    AAWISSI2 and AAWISSI3 represent the mitogen activated protein (WAP) kinases of the invention. This sequence contains the T-E-Y sequence, in which the threonine and tyrosine residues are phosphorylated to activate the protein at residues 249-251. The WAP kinase and its gene can be used to regulate the synthesis of jasmone acid and the synthesis of a group of infectious specific proteins. By introducing the MAP kinase gene into a plant, thereby inducing expression of the mRNA for MAP kinase gene into a plant, thereby inducing expression of the mRNA for MAP kinase (or its antisense RNA), the synthesis of jasmone acid and a group of infectious specific proteins can be regulated in the plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         190

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a rice mitogen-activated protein kinase 5
(MARKS) polypeptides and the polymucleotides encoding them. The invention
also relates to an antibody that specifically binds to a peptide
consisting of a C-terminal portion of a MARKS polypeptide, a transgenic
c plant transformed by a polymucleotide encoding a MARKS orthologue where
cover expression of the MARKS orthologue in the plant results in increased
tolerance to abiotic stress compared to a wild-type plant and a method
for evaluating a plant for tolerance to abiotic stress comprising
for evaluating a plant with abiotic stress, isolating a MARKS protein from the
plant, detecting MARKS activity and evaluating the increase or decrease
in MARKS activity in the plant where the increase in MARKS activity
indicates the plant is tolerant to abiotic stress. The methods and
compositions of the present invention are useful for increasing tolerance
to abiotic and biotic stress in plants using MARKS, where the abiotic
stress is drought, temperature or salinity and the biotic stress is from
